Heat Treatment (ASME Code's Guideline):

PREHEAT TABLE:

ASME Section VIII-Division 1: Preheating from Appendix R (a) 175 °F (80 °C) for material which has both a specified maximum carbon content in excess of 0.30% and a thickness at the joint in excess of 1 in. (25 mm): (b) 50 °F (10 °C) for all other materials of P-No. 1 group.

POSTWELD HEAT TREATMENT TABLE:

ASME Section VIII-Division 1: Requirements for PWHT of Table UCS-56 Min. Holding Temperature: 1,100 °F (595 °C) Min. Holding Time for Weld Thickness (Nominal): Up to 2 in. (50 mm): 1 hr/in. (2 min/mm), 15 min Min. Over 2 in. (50 mm): 2 hr plus 15 min for each additional inch over 2 in. (50 mm) Heating and Cooling rate: Max. 400 °F (220 °C) per hr divided by the maximum thickness of material in inches at the weld, but no more than 400 F (220 °C)/hr: Min. 100 F (55 °C)/hr For Mandatory & Non-Mandatory thickness conditions of PWHT, See Note (2) of Table UCS-56 For PWHT at lower temperatures for longer periods of time, See Note (1) of Table UCS-56

PQR Qualified Range (ASME IX Guideline):

Qualified Positions (Groove, Fillet): <u>All Positions for Plate or Pipe</u>.) Unless specifically required otherwise by the welding variables (QW-250), a qualification in any position qualifies the procedure for all positions. The welding process and electrodes must be suitable for all positions permitted by the WPS (ASME Section IX, QW-203). (For impact test application, there are some restrictions for welding in vertical-uphill progression position; See ASME Section IX, QW-405.2)

Qualified Thicknesses (Groove, Fillet): 3/16 in. (5 mm) Min., 8)in. (200 mm) Max. (Plate or Pipe)

[When testing longitudinal-bend tests only: 2T Max.]

[For impact test application, except ESW process: Min. Qualified Thickness is 5/8 in. (16 mm); This variable does not apply when a WPS is qualified with a PWHT above the upper transformation temperature or when an austenitic material is solution annealed after welding. ASME IX, QW-403.6]

[For ferrous base metals other than P-No. 7, 8 and 45 (when test coupon receives a PWHT above the upper transformation temperature): 1.1T Max. ASME IX, QW-407.4]

[For any weld pass greater than 1/2 in. (13 mm) thick: 1.1T Max. (Except GTAW process). ASME IX, QW-403.9]

T: Thickness of Test Plate or Pipe Wall in PQR (ASME Section IX, Table QW-451.1)

Qualified Diameters (Groove, Fillet): All Nominal Pipe (Tube) Sizes, within Qualified Thicknesses in PQR

WPS Base Metal P-Number Allowed by PQR: (Any metals of the same P-No. 1 tested in PQR (ASME Section IX, QW-424)

Qualified WPS Filler Metal Allowed by PQR: (Only Filler Metal categories with the same F-number and same A-number tested in PQR. Any) electrode diameter sizes can be used in WPS,) as it is not an essential variable for the most process and conditions. For Non-impacted test applications only, filler metal classification within an SFA specification, with the same F-number and the same A-number and the same minimum tensile strength and the same nominal chemical composition can be used in WPS. (ASME Section IX, QW-250)

Qualified Weld Metal Deposit (Groove, Fillet): 2t Max. when t is less than 3/4 in. (19 mm) (Plate or Pipe) Qualified Weld Metal Deposit (Groove, Fillet): 8 in. (200 mm) Max. when t is equal or larger than 3/4 in. (19 mm)) [For GMAW-Short Circuit Arc, when t is less than 1/2 in. (13 mm): 1.1t Max.] [When testing longitudinal-bend tests only: 2t Max.] t: Thickness of Weld Metal Deposit in PQR, Plate or Pipe Wall (ASME Section IX, Table QW-451.1)) 4
